T This protein is a member of a "small inducible" or "activation
specific" gene family, is likely to be an early-acting
interleukin, and is the product of a putative G0/G1 switch gene.
                                                                                                                                                                                       Nakao, M.; Nomiyama, H.; Shimada, K.

FURPOGLA)MCP-4 RE PRODUCED BY DIFFERENTIAL SIGNAL CLEAVAGE. (LA)MCP-4 IS ABOUT 30 FOLD LESS ACTIVE THAN MCP-4. SIMILARITY: BELONGS TO THE INTERCRINE BETA FAMILY (SMALL CYTOKINE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        POWER C.A., MEYER A., RISON S.C.G., GUVE-COULIN F., WELLS T.N.C.;
SUBMITTED (DEC-1997) TO EMBL/GENBANK/DDBJ DATA BARKS.
-!- FUNCTION: CHEMOTACTIC FACTOR THAT ATTRACTS MONOCYTES, LYMPHOCYTES,
--BASOPHILS AND EOSINOPHILS, BUT NOT NEUTROPHILS. SIGNALS THROUGH
CCR2B AND CCR3 RECEPTORS. PLAYS A ROLE IN THE ACCUMULATION OF
LEUKOCYTES AT BOTH SIDES OF ALLERGIC AND NONALLERGIC INFLAMMATION.
MAY BE INVOLVED IN THE RECRUITMENT OF MONOCYTES INTO THE ARTERAL
WALL DURING THE DISEASE PROCESS OF ARTHEROSCLEROSIS. MAY PLAY A
ROLE IN THE MONOCYTE ATTRACTION IN TISSUES CHRONICALLY EXPOSED TO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          MASS SPECTROMETRY: MW-9314; MW_ERR-30; METHOD-MALDI; RANGE-17-98.
MASS SPECTROMETRY: MW-8760; MW_ERR-30; METHOD-MALDI; RANGE=22-98.
MASS SPECTROMETRY: MW-8575; MW_ERR-30; METHOD-MALDI; RANGE=24-98.
INDUCTION: BY INTERLEDENT EXPRESSED. FOUND IN SMALL INTESTINE;
TISSUE SPECIFICITY: WIDELY EXPRESSED. FOUND IN SMALL INTESTINE;
SEEN IN THE PULMOY, TRACHER, STOWACH AND LYMPH NODE. LOW LEVELS
SEEN IN THE PULMOYARY RATERY SMOOTH MUSCLE CELLS.

BIOPHYS. RES. COMMUN. 205:148-153(1994).
-:- FUNCTION: CHEMOTACTIC FACTOR THAT ATTRACTS MONOCYTES. THIS PROTEIN CAN BIND HEPARIN.
                                                                                    SUBMITTED (OCT 1995) TO EMBL/GENBANK/DDBJ DATA BANKS.
SUBMITTED (OCT 1995) TO EMBL/GENBANK/DDBJ DATA BANKS.

-!- FUNCTION: HAS WEAK ACTIVITIES ON HUMAN MONOCYTES AND ACTS VIA RECEPTORS THAT ALSO RECOGNIZE MIP-1 ALPHAN IT INDUCED INTRACELLULAR CA2+ CHANGES AND ENZYME RELEASE, BUT NO CHEMOTAXIS, AT CONCENTRATIONS OF 100-1,000 NM, AND WAS INACTIVE ON T LYMPHOCYTES, NEUTROPHILS, AND EOSINOPHIL LEUKOCYTES. ENHANCES THE PROLIFERATION OF CD34 WYELOID PROCENTIOR CELLS.

-!- TISSUES PREDEITIVITY: EXPRESSED CONSTITUTIVELY IN SEVERAL NORMAL TISSUES. SPLEEN, LIYER, SKELETAL AND HEART MUSCLE, GUT, AND BONE MARROW, PRESENT AT HIGH CONCENTRATIONS (1-80 NM) IN PLASMA.

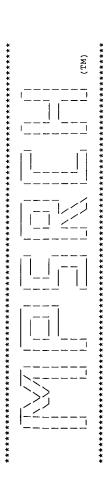

-:- SIMILARITY: BELONGS TO THE INTERCRINE BETA FAMILY (SMALL CYTOKINE

Statistics: Mean 24.455; Variance 36.695; scale 0.666

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

ts annotation; conformation and disulfide bond assignments by (1)H-NMR, residues 24-92
This protein is secreted by activated lymphocytes and monocytes. It is bound by chemokine (C-C) receptor 5 (see PIR:A43113) and receptor 1 (see PIR:A45177).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  #domain signal sequence #status predicted #label SIG\

This protein is a member of a "small inducible" or "activation specific" gene family, is likely to be an early-acting interleukin, and is the product of a putative G0/G1 switch gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                #authors Blum, S.; Forsdyke, R.E.; Forsdyke, D.R.

A family of small inducible proteins secreted by leukocytes are members of a new superfamily that includes leukocytes and fibroblast-derived inflammatory agents, growth factors, #cross-references MUID:89083958 to various activation processes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              #journal J. Exp. Med. (1988) 168:2251-2259
#title Resolution of the two components of macrophage inflammatory protein 1, and cloning and characterization of one of those components, macrophage inflammatory protein 1 beta.
                                                                                                                                                                                                                                                                                                                         J. Exp. Med. (1988) 167:1939-1944
Cloning and characterization of a cDNA for murine macrophage
differs at several positions from the sequence given
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              the authors translated the codon GAG for residue 49 as
Asp and ATT for residue 91 as Asn
the Sequence has been corrected in reference A53885
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          lerry, B.; Tekamp-Olson, P.; Gallegos, C.; Bauer, D.;

```
This protein belongs to the beta-chemokine family which is one of the major HV-suppressive factors. It plays roles in autoimmune processes such as multiple sclerosis and rheumatoid arthritis and in tumor biology, and contribute to the trafficking and recuitment of the responsive cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   FERENCE JC5295

Statistics: Mean 18.046; Variance 69.849; scale 0.258

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

providing better tissue penetration

bisclosure; Page 181-182; 294pp; English.

The secondary and territary structure of LD78 and MIP-lalpha have
been shown to be almost identical. Only a difference in the nature
of a side-chain or charge interaction in the vicinity of Trp57 is
cof a side-chain or charge interaction in the vicinity of Trp57 is
been shown to be almost identical. Dayl a difference in the nature
of a side-chain or charge interaction in the vicinity of Trp57 is
cobserved for the two proteins. Despite having a similar secondary
structure to LD78 and MIP-lalpha, near u.v. c.d. studies show ACT2
has a different tertiary conformation as highlighted by the shape
and intensity of the spectrum. This provides strong evidence that
LD78 and not ACT2 is the human homologue of MIP-lalpha.
Analogues of natural stem cell inhibitors, such as LD78 and MIP-
lalpha, having mutations to prevent or reduce multimer formation
beyond certain stages (e.g. dodecamer), have improved solution
cutility as stem cells. The contextive agents. The analogues may be used
in tumour therapy, psoriasis or other diseases involving hyper-
tunour therapy, psoriasis or other diseases involving hyper-
tunour therapy, analogues are Phel2-Gln, Ly344>Ser, Arg17>Gln (with
cln18>Glu) and, esp., Asp28>Analogues.

properties or the pref. LD78 analogues.

While you shall work the parachemokine, ZCHEMO-8 - used to develop products for treating e.g. ischaemia, reperfusion, wound healing, products for treating e.g. ischaemia, reperfusion, wound healing, by products for treating e.g. ischaemia, reperfusion, wound healing, by inflammantion, asthma or infections bisclosure; Page 93: 131pp; English.

CC This sequence represents a human beta chemokine, ZCHEMO-8 is isolated. CA letered levels of ZCHEMO-8 may be indicative of pathological conditions, including infections, cancer, myelopoletic disorders, autoimmune calls (and immunodefaliencies. The ZCHEMO-8 polypeptides can be used, c.g. to reduce the damage in ischaemic and reperfusion injuries, in a wound healing regime to stimulate an infiltration of immune cells (e.g. condocytes, neutrophils, T lymphocytes or basophils) to a wound site to facilitate healing. ZCHEMO may be used to mobilise progenitor cells from the marrow into the peripheral blood for transplants. ZCHEMO-8 polypeptides could be used to further define the role of chemokines in mediating suppression of HIV infection to AIDS. Use may be made of ZCHEMO-8 polypeptides during chemotherapy or radiation therapy, to protect harmatopoietic cells. ZCHEMO-8 antagonists may be made of ZCHEMO-8 certain macrophages, neutrophils, basophils, Blymphocytes and/or T cells can appetute effect in diseases where the inhibition of activation of certain macrophages, neutrophils, basophils, Blymphocytes and from using ZCHEMO-8 antagonists for chronic inflammatory celearosis, insulin dependent diabetes and systemic lupus erythematosus, rheumatoid arthritis, allergies, asthma or arteriosclerosis. Also benefit may be desired from using ZCHEMO-8 antagonists for chronic inflammatory and infective diseases. Antagonists may be used to dampen or inactivate confidence of the deciration or gene therapy.

                used as markers specific for activated T cells, for monitoring the immune system.

Disclosure; fig 2; l6pp; English.

H400 polypeptide (see N90532). This protein is specifically produced by activated T cells, and is useful for detecting cells which produce H400 or mRNA transcripts of H400 for monitoring the immune system. Claims 1 and 2 give polypeptides corresp. to the featured peptides above.
                                                                                                                                                                                                                                                     Score 91; Pred. No. 8.88e-02; Viennatches 0; Indels

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Expression of pure mammalian macrophage inducible proteins in yeast - to produce MIP for treatment and diagnosis of cancer, infection, myelopoietic dysfunction, etc.

Example 3; Fig 1; 38pp; English.

This sequence was deduced from the nucleotide sequence 023729.

This sequence was produced by cloning into the expression vector pyMIP300. The human MIP-lalpha sequence was derived from the lambda gilo cDNA clone hMIP1-13, and the GAPDH promoter sequence, alpha factor transcription terminator derived from plasmid pGAII, cappa factor transcription terminator derived from plasmid pGAII, construction of which is described in patent application EP034-274. Recombinantly produced MIP proteins have diagnostic and therapeutic utility for detecting and treating infections, cancer, myelopoietic dysfunction and autoimmune diseases. Although not directly cytotoxic for WEHI tumor cells, MIP-I treated macrophages
                                                                                                                                                                                                                                                                                Suppression of megakaryocytopoiesis - by administration of megakaryocytopoiesis - by administration of macrophage inflammatory protein-1 or -2 Disclosure; Page 17: 26pp; English.

A claimed method for reducing the no. of circulating platelets in the bloodstream of a mammal comprises admin. of MIP-1 and/or MIP-2 or their analogues to induce such a reduction. The MIP-1, MIP-2 or analogue may be operatively linked to a carrier. The MIPs can be used to inhibit megakaryocytopoiesis to effect in vivo reduction of platelet nos. They can be used to treat disorders with excessively high platelet counts such as thrombocytosis, stroke, pulmonary emboli
                                                                                                                                  Macrophage inflammatory protein; megakaryocytopoiesis; MIP-1; MIP-2; thrombocythemia; reactive thrombocytosis; stroke; emboli; platelet; myeloproliferative disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

                                                                                                                                                                                                                                                                                                                                                               Gaps
                     tumour targets. MIP-1 treatment stimulated proliferation of mature tissue macrophages; this effect was synergistic with both CSF-1 and GM-CSF. Purified preparations of the recombinantly derived MIP-lalpha peptide alone induced TNF and IL-6 in macrophages, but MIP-labet adid not. As little as twofold excess MIP-lbeta blocked bioactivity defined for native MIP-1 and recombinant MIP-lalpha blocked bioactivity defined for native MIP-1 and recombinant MIP-lalpha errythropoietin of proliferation of less differentiated sequence 92 AR.
exhibited enhanced antibody-independent macrophage cytotoxicity for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

The lymphokine/cytokine-like proteins are associated with the inflammatory response and/or have mitogenic activities. Antigens raised to the proteins may be useful in detection and purification, especially in bloassays of various tumour cells or genetic defects in the inflammatory response.

This sequence represents a human chemokine MIP-lbeta domain, derived from sequence represents a human chemokine MIP-lbeta domain, derived from HUMACT2A. This sequence is used in the production of a construct comprising an isolated polynucleotide encoding a chimeric polypeptide evaluation comprises at least I chemokine polypeptide evaluation that chimeric polypeptides will have longer and in the construction, the chimeric polypeptides will have longer and increased biological activity and can direct the chemokine to a particular site. The chimeric polypeptides can also be designed to inhibit or desensitise chemokine receptors. They can be used to affect the chemotactic recruitment of migratory calls, e.g. for stimulating or inhibiting angiogenesis, for regeneration of bone, cartilage, ligament or for treating or preventing inflammatory or autoimmune disorders. They can also be used as vaccine adjuvants or to enhance the activity of antigen cresenting calls and for treating or preventing HIV infection.

Neutralising antibodies binding to the chimeric polypeptide may also be useful as the chemokine domain of the chimeric polypeptide and also in the treatment of some forms of cancer where abnormal expression of contacts.
                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       02-DEC-1998 (first entry)

Human chemokine MIP-lbeta domain protein fragment.

Chemokine, MIP-lbeta chimeric; human; heterologous protein; inhibitor; receptor; chemotaxis; migratory cell; angiogenesis; bone; regeneration; cartilage; ligament; tendon; bone marrow; transplant; inflammation; autoimmune disorder; vaccine adjuvant; antigen presenting cell; cancer; HIV; human immunodeficiency virus; therapy; prevention.
isolated using mRNA from activated human periferal blood isolated using mRNA from activated human periferal blood mononuclear calls and T cells.

Disclosure; 184pp; English.

Disclosure; 184pp; English broteins are associated with the purphokine/cytokine-like proteins are associated with the inflammatory response and/or have mitogenic activities, Antigens raised to the proteins may be useful in detection and purification, especially in bioassays of various tumour cells or genetic defects in the inflammatory response.

The best copy of the sequence available is still unclear and some errors in the sequence may occur.
                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New chimeric polypeptide(s) - comprise chemokine polypeptide covalently linked to heterologous polypeptide, used for, e.g. chemotactic recruitment of migratory cells Example 1; Page 53; 69pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                          Screening for cpds. with anti-heparanase activity - by detecting screening for cpds. with anti-heparanase activity - by detecting inhibition of heparin or heparan sulphate degradation, potentially useful for treating arthritis, restenosis, cancer. Claim 13: Page 47: 60pp; English.

Purified heparanases, prepared under reducing conditions and activated with transglutaminase, are given in R70786-804. Most are prepared by reverse transcription of mRNA from activated human leukocytes, then cloning of the cDNA into pVL1392 baculovirus vector, and expression in Sf9 cells in the presence of reduced Sequence 92 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Probes raised to the gene product may be used in bioassay of the product, useful in detecting tumour cells, genetic defects in the inflammatory response, or in vivo, for the detection of immune system activation. The proteins may also be used to determine the presence of their receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New lymphokine-cytokine-like genes - isolated by subtraction cloning and hybridisation using mRNA from activated peripheral blood T cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ;

Probes raised to the gene product may be used in bloassay of the product, useful in detecting tumour cells, genetic defects in the inflammatory response, or in vivo, for the detection of immune system activation. The proteins may also be used to determine the presence of their receptors.

This sequence represents a human chemokine MIP-lbeta domain, isolated from CDNA clone MPB-X. This sequence is used in the production of a construct comprising an isolated polynucleotide encoding a chimaric polypeptide which comprises at least 1 chemokine polypeptide covalently attached to at least 1 heterologous polypeptide. By including a attached to at least 1 heterologous polypeptide By including a have longer and increased biological activity and can direct the chawce longer and increased biological activity and can direct the chemotracial site. The chimaric polypeptides will casigned to inhibit or desensitise chemokine receptors. They can be used to affect the chemotractic recruitment of migratory cells, e.g. for affect the chemotractic recruiting transplanted bone marrow cartilage, ligament or tendon, for recenting transplanted bone marrow cartilage, ligament or tendon, for recruiting transplanted bone marrow calls to bone marrow, or for treating or preventing inflammatory or autoimmune disorders. They can also be used as vaccine adjuvants or to enhance the activity of antigen presenting cells and for treating or preventing HIV infection. Neutralising antibodies binding to the chimeric polypeptide and also in the treatment of some forms of the chameric polypeptide and also in the treatment of some forms of cancer where abnormal expression of the chemokine is involved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  laipha, having mutations to prevent or reduce multimer formation beyond certain stages (e.g. dodecamer), have improved solution properties leading to enhanced productivity and greater therapeutic utility as stem cell protective agents. The analogues may be used in tumour therapy, psoriasis or other diseases involving hyperproliferative stem cells.

Most pref. LD78 analogues are Phel25Gln, Lys44>Ser, Arg1>Glu (with analogues correspond to the pref. LD78 analogues.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     WPI; 93-227322/28.

Protein with stem cell inhibition activity, e.g. LD78 or MIP-1 alpha - unable to form stable multimer higher than dodecamer, providing better tissue penetration.

Example 23; Page 58; 294pp; English.

Analogues of natural stem cell inhibitors, such as LD78 and MIP-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
